

In partnership with

Audio made smart and easy

Network audio systems for security,
announcements and background music

A world of audio possibilities

Axis network audio systems are complete high-quality audio systems you can use to:

- > Improve security on your premises with event-triggered announcements and direct callouts
- > Make live or scheduled announcements in different zones, at the right time and right place
- > Create ambiance with easy and flexible scheduling of great-sounding background music

All while enjoying the many benefits of a network audio system.

Top reasons for network audio

Network audio systems are intelligent devices, just like IP video cameras, and offer many of the same types of benefits.

ALL IN ONE

Get a single, cost-effective integrated system for background music and announcements with **everything you need built right in.**

SCALABLE

It's both easy and cost-effective to update and add units to your solution as your needs change, regardless of whether you want to increase the size, add sites or simply take advantage of new features.

FLEXIBLE

Play and schedule **different content in different zones** – and easily change both the zones and the content anytime, as needed.

Power + connection

EASY TO INSTALL

You need only a single standard network cable for connectivity, power and communication and connecting to your existing infrastructure – and there's no need for tuning.

EASY TO INTEGRATE

Connect and integrate your audio system with other systems and devices, such as your access control system and cameras.

INTELLIGENT SYSTEM

Use an integrated audio player and built-in or plug-in apps for music streaming, event-driven or scheduled announcements, audio detection, health monitoring, and so on.

So what can you do with network audio systems?

Use cases - with the benefit of central control.

Security

Stop unwanted activity in its tracks

A network audio system is the perfect addition to a video-based security installation. Perimeter protection is a great example of this. Imagine if a potential intruder climbs a fence. The camera alerts a security guard to give a warning to the intruder using the audio system, "We can see you, you're trespassing." More often than not, this type of warning is sufficient, preventing the need for additional security measures.

Public address

Broadcast to single or multiple zones

A network audio system answers the need for different kinds of informative messages and updates in environments such as schools, retail stores, hotels and public buildings. For example, you can use it to make a live announcement calling someone to a specific area, such as a colleague to the clothing department. To make a scheduled announcement about the start of the school day. Or to issue a live or triggered announcement during an emergency.

Background music

Play music how and where you want to

A network audio system can support retail stores and hotels, for example, in creating the perfect ambiance background music. You benefit from pre-set volume and music choices as well as both central and remote control for easy management. And you can choose to combine background music with scheduled and live announcements for the best possible customer experience.

Presenting our network audio systems

Our entire portfolio of network audio systems is based on open standards for easy integration with other systems. They're also ready to use right out of the box and feature PoE for fast and simple installation.

Network Speakers

- > Complete audio systems in a single unit
- > Live or scheduled announcements
- > Background music

AXIS Audio Manager

- > Manage and control your network audio system from a single user interface
- > Play and schedule different content in different zones, at the right time and right place
- > For larger, more complex systems

AXIS Audio Player

- > Audio application for background music and announcements
- > Schedule playlists with music and announcements
- > For smaller, more basic systems

AXIS C3003-E Network Horn Speaker

- > Clear and simple horn speaker
- > Part of a complete surveillance solution
- > Outdoor ready

2N SIP Mic

- > Turn your Axis network speakers into a complete public address system
- > All-in-one network microphone console
- > Configurable buttons for multiple zones

AXIS C8033 Network Audio Bridge

- > Connect and combine analog and network audio
- > Broadcast music and sound from any source
- > Reap the benefits of network audio while protecting your investments
